

Sweetie™
(Prem1A cv.)

This is a Braeburn x Royal Gala cross with good productivity. Harvest starts similar to slightly earlier than Royal Gala. Fruit is differentiated by elongated shape and sweet, rich taste. Texture after storage is similar to Royal Gala. This selection is licensed by Prevar. USPP#19,762.

Fuji Supreme™
(Cabp cv.)

This Fuji retains standard Fuji storage qualities but offers superior fruit appearance. Its dark color and bold striping enhances orchard performance. Fruit is large size with low acid. This is a late variety.

Pink Lady®
(Maslin cv.)

A new early maturing selection of Cripps Pink. The fruit matures a good three to four weeks ahead of the standard Cripps Pink. All other tree and fruit characteristics appear to be the same as the original variety.

Pink Lady®
(Pflogg cv.)

This is a new and distinct spur-type apple tree notable for its compact tree type, spur bearing habits, and high productivity compared to Cripps Pink and other known sports.

Morning Mist™ Fuji
(Fugachee cv.)

Morning Mist Fuji is an early maturing sport of Fuji that ripens ahead of standard Fuji. This variety has a creamy white flesh and sweet flavor similar to standard Fuji. The color pattern is a bright-red finish with a thin striping pattern that, in high-coloring areas, might cover over.

Cherry™ Gala
(Burkitt cv.)

Cherry Gala is a sport of Royal Gala. It is a cherry-red colored apple with striping that matures slightly ahead of Royal Gala. This apple has a crisp, full flavor, and a striking appearance.

Royal Crimson® Topaz
(Tupy2 cv.)

This is a high-colored sport of the selection Crimson Topaz that has done very well in Europe. It is a very precocious, regular-bearing variety with scab resistance. Fruit holds well on the tree. Color pattern is a bright red with a yellow-orange undercolor with a tart flavor.

PremP109
(PPAF)

A red blushed Nashi-type juicy interspecific pear of moderate to large size. The pear has a mild sweet, low-acid flavor with slightly coarse texture. It is scab resistant with excellent storage performance. This is only available for testing purposes at this time.

PremA153

PremA153 is a very productive variety. The fruit is elongated in shape with high eating quality. A nice blush does develop, but the fruit should be picked when the green color is breaking to golden. The apple is quite dense and develops a better eating quality after being held in storage. USPP#21,936 — P3.
